Large Hadron Collider and petits lies lying behind

Dear S, You may bring this message to the attention of the Austrian ministers, if you wish. They have proceeded correctly and responsibly (they withdrew Austria from the Centre Europeen pour la Recherche Nucleaire, CERN).

To: Science Minister

Dear Sir, Appended below is an email from Professor MA, in support of the Austrian decision, which he suggested I forward to you. Yours faithfully, S.J.C.

Dear Sirs,

People at the Large Hadron Collider (LHC) at CERN declare that one of their biggest goals is the understanding of the quark-gluon plasma, which would reproduce the original Big Bang. They claim that this is a big issue, and have consumed a great deal of money in the past ten years for studying it. Of course, they have not solved the problem and are asking for more funding. Judging by the quality of the people around me who are participating in LHC I can say truthfully that LHC is a lie, as are many other big international "research" projects. Among others, the LHC is the originator of the GRID concept, another great roguery. Such projects may be useful for developing technical skills or products, like electronics, engineering, materials, etc., of practical and social utility, for ensuring jobs, perhaps socially useful, but they should not do that in the name and disguise of scientific research. Genuine scientific research is thereby eliminated and destroyed by such practices. I have presented my paper on the quark-gluon plasma at a public seminar on my campus here at Magurele-Bucharest. Though it attracted a lot of local interest, do you think that the "LHC experts" have shown the slightest sign of interest? Not in the least. They are not interested in science; they are interested in their own purse, to fill it from public money. This is indeed a shame!

Best regards, MA (2009)

Professor MA is indeed a distinguished scientist. He has published 25 science textbooks and over 300 papers, and received awards and medals from the four corners of the globe. His achievements are vast, simply too much to even summarise here (HR).

S.C. is an Australian mathematician who has provided proof, without rebuttal, that Black Holes are in both theory and practice impossible (HR).
